SECURE ONLINE BACKUP

HC's Online Backup solution is offered as BaaS, which provides a fully automated, encrypted online backup and recovery service

"We have been using HC's Online Backup since August 2011. The service has simplified the surgery's IT and saves money. There is no need to check the backup and change the tapes every day, and we no longer have to buy expensive back-up tapes."

Steve Boyd
Practice Manager
Whiteparish Surgery

Service description

The solution enables organisations to backup their data off-site, over the internet and using dedicated IP links.

The service automatically protects data residing on desktops, laptops, servers and networks. Data is compressed, encrypted and sent to one of our secure state of the art Datacentres before being replicated to a second secure Datacentre, assuring the data is safely offsite for disaster recovery and regulatory compliance purposes.

When data recovery is required, users can simply select the data to be restored by using an intuitive interface, or for large data sets, the data can be returned to site for local, high speed LAN-based recovery.

The service has been developed in line with business needs and is fully scalable; the service will grow and evolve with your business data and meets the needs of small, medium and large organisations.

Reduce operation costs:

Online Backup reduces operational costs and is less expensive than running backup and recovery in-house.

The solution automates the entire backup process, freeing up staff time and reducing the risk of data loss inherent in manual backup procedures. Online Backup also minimises storage management costs and significantly improves backup Service Level Agreements (SLAs).

Data is stored off site in high security data centres which means no investment in storage and backup equipment is required. Simple to use, its consistent and regular data backups safeguard the confidentiality of data through robust, industry standard encryption.

Benefits & Features:

- ✓ No investment in storage and backup equipment
- ✓ Data is saved and stored off site in high security Datacentres
- ✓ No tape, tape management and off site storage costs or concerns
- ✓ Maximum data availability and data security
- ✓ No need to acquire and maintain specific storage technical knowledge
- ✓ Consistent regular data backups with minimum human intervention
- ✓ Safeguards the confidentiality of customer data through strong encryption
- ✓ Meets NHS IG required security standards*
- ✓ Rapid data recovery online or with an optional data recovery appliance
- ✓ Simple and easy to use
